gb ram. when i install, the accessing from the plugin is very slow. is it possible to have 2 desktop and 4 virtual desktops? and how to do it? OerHeks: I don't need anything like that, but I did try to do an upgrade but stopped, too afraid to crash my system where can i get help with unity? Perhaps I should try installing an older kernel TheLastProject: you can use the dpkg -r packages to remove those packages manually TheLastProject: i guess you are safe, just reinstall 14.04.1 and set that partition as /home, not that big a deal OerHeks: Yeah, I would do that, but I'd still have to copy some config files over, so I don't want to do that without knowing what's going on OerHeks: And I don't want to take the time to do it now Guest\_\_\_\_: u want to ask which is unity 8 or 17 TheLastProject: you can copy them before you do the fresh install, you "could" face errors if you do not. not a good idea. unity 17 OerHeks: Yeah, I was thinking the same thing not unity 8 Guest\_\_\_\_: u mean what version is installed 17.10 is there a way to open software center from command line? nvm Guest\_\_\_\_: try this dpkg -l | grep -i software-center that command lists all packages then what? Guest\_\_\_\_: try this dpkg -l | grep -i gnome-software just apt-cache policy gnome-software OerHeks: dont use the 2nd apt-cache show commands k!!: Isn't apt-cache show supposed to 82157476af
